

WHAT IS CLAIMED IS:

1. A cellular telephone set capable of displaying still images on a display screen, displaying an image display screen displaying still images in thumbnail form so that contents of
5 images can be seen at a glance and a frame display screen displaying still images selected on the image display screen for animation display per frame number in thumbnail form, simultaneously with each other.
- 10 2. The cellular telephone set as set forth in claim 1, wherein said still images are still images consecutively picked up by a consecutive photographing function using a digital camera.
3. The cellular telephone set as set forth in claim 2, wherein
15 a plurality of still images consecutively picked up by said consecutive photographing function are displayed in said image display screen, and the still images selected on the image display screen are displayed in said frame display screen and registered as animation.
- 20 4. The cellular telephone set as set forth in claim 3, wherein a reproduction speed of said still images registered as animation is variable.
- 25 5. The cellular telephone set as set forth in claim 3, wherein repeat setting in said still images registered as animation is variable.

6. A self-produced animation setting method of consecutive images of cellular telephone capable of displaying still image on a display screen, comprising:

5 step of displaying an image display screen displaying still images in thumbnail form so that contents of images can be seen at a glance; and

step of displaying a frame display screen displaying still images selected on said image display screen for animation
10 display per frame number in thumbnail form, simultaneously with display on said image display screen.

7. The self-produced animation setting method as set forth in claim 6, wherein said still images are still images
15 consecutively picked up by a consecutive photographing function using a digital camera.

8. The self-produced animation setting method as set forth in claim 7, wherein a plurality of still images consecutively
20 picked up by said consecutive photographing function are displayed in said image display screen, and the still images selected on the image display screen are displayed in said image display screen and registered as animation.

25 9. The self-produced animation setting method as set forth in claim 8, wherein a reproduction speed of said still images registered as animation is variable.

10. The self-produced animation setting method as set forth in claim 8, wherein repeat setting in said still images registered as animation is variable.

5

11. A computer executable program of a self-produced animation setting method of consecutive images of cellular telephone capable of displaying still image on a display screen, comprising:

10 step of displaying an image display screen displaying still images in thumbnail form so that contents of images can be seen at a glance; and

 step of displaying a frame display screen displaying still images selected on said image display screen for animation
15 display per frame number in thumbnail form, simultaneously with display on said image display screen.

12. The program as set forth in claim 11, wherein said still images are still images consecutively picked up by a consecutive
20 photographing function using a digital camera.

13. The program as set forth in claim 12, wherein a plurality of still images consecutively picked up by said consecutive photographing function are displayed in said image display
25 screen, and the still images selected on the image display screen are displayed in said frame display screen and registered as animation.

14. The program as set forth in claim 13, wherein a reproduction speed of said still images registered as animation is variable.

5 15. The program as set forth in claim 13, wherein repeat setting in said still images registered as animation is variable.
